Using **SELECT INTO** command build table **NewOrderDetails** from the [Order details] Table

Check plan, IO and time statistics for command

      "select * from NewOrderDetails WHERE productid between 10 and 20 "

      With these indexes (all other index dropped or disabled)

1. No Indexes.
2. Clustered index on (ordered + productid)
3. Non clustered index on productid
4. Filtered index on productid > 30
5. Filtered index on productid > 5
